- Promotion of products of Russian manufacturers of medical equipment and medical supplies to foreign markets
- Formation of the market of medical services, high-quality medical equipment, technologies and medical preparations
- Localization of production of foreign companies in the territory of the Russian Federation
- Organization of medical conferences in Russia and abroad.
- Promotion of medical education and training technologies

Mobile Digital X-Ray and Mammography Unit

The complexes are designed to survey the population in rural areas, inaccessible remote areas, as well as in cities and towns with visits to enterprises and organizations.

Mobile X-ray equipment

The device is designed for medical diagnostics by radiography in hospital wards, trauma centers and in the field

Mobile X-ray equipment

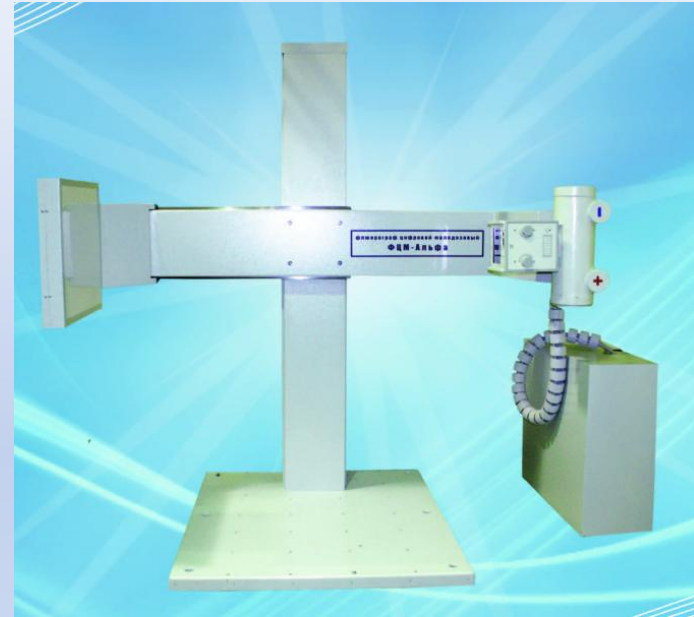

Portable digital fluorograph with manipulative table

The device is intended for medical diagnostic studies by radiography in hospital wards, trauma centers and in the field

Stationary low-dose digital X-ray Machine

A stationary low-dose digital X-ray Machine is designed for radiographic examinations of the thorax in a straight or lateral projection in the standing position with the minimum possible radiation load in the stationary conditions of medical institutions and on mobile vehicles. Provides production of at least 60 surveys per hour.

Mobile X-ray machine for irradiation of donor blood and its components

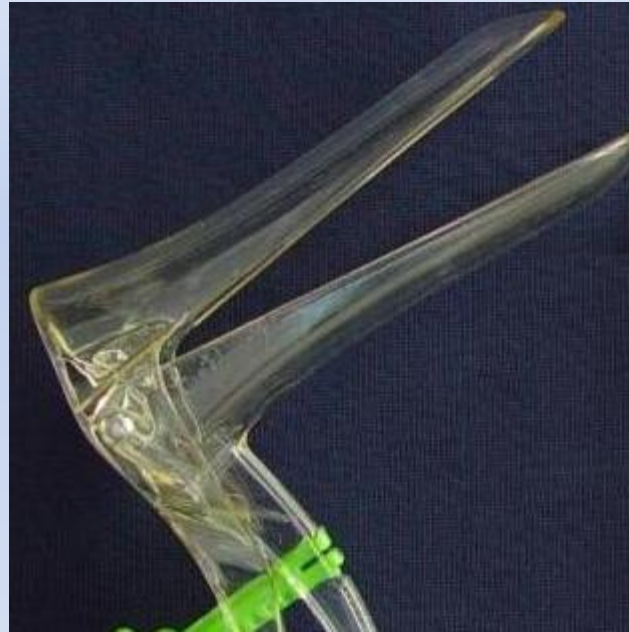

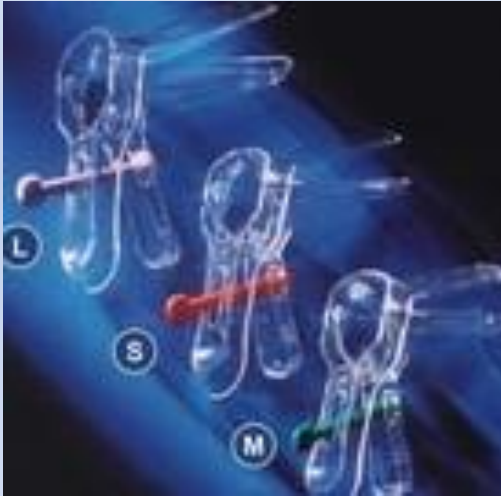

The "ARDOK-1" device is used in all cases when it is necessary to perform blood transfusion to an immunosuppressed patient in order to remove any possible foreign cells from the transfused material that may be incompatible with the recipient in order to avoid the "Graft-versus-host"

Laboratory system for laser-fluorescent diagnostics can use for

- screening of large masses of people under study during medical examination and detection of healthy or sick groups;
- early detection in the surveyed people the presence of sluggish or acute microbial infection in the body;
- selection individually for each patient with a microbial infection within 3-6 hours of the required antibiotic
- early detection in the surveyed people the presence of syphilis at any stage
- detecting the presence or transferred of a viral infection such as a herpetic or adenovirus infection
- finding of various forms of lesions of the hepato-duodenal system of unclear etiology, before manifestations of changes in the biochemical analysis of blood;
- early detection of risk groups for pulmonary and extra pulmonary forms of tuberculosis in a screening survey of large groups of people

Instruments and equipment for gynecology and surgery

Immunomodulator

The main properties of the drug are:
